THE STENNER ADVANTAGE

1. Self-priming against maximum working pressure
2. Can inject off-gassing solutions
3. No vapor lock or loss of prime
4. Easy tube replacement without tools
5. Uniquely manufactured solid one piece tube construction
6. Tube lubrication not required
7. Three point roller design assists with anti-siphoning
8. Output reproducibility
9. Output volume not affected by back pressure
10. Foot, prime or de-gassing valve not required

SOLID CONSTRUCTION

- Brushless DC motor is equipped with ball bearing support
- Switch mode power supply is energy efficient
- Totally enclosed pump is outdoor rated
- OLED operating display is easy to navigate with intuitive programming
- QuickPro® pump head offers tube replacement without tools
- Splined shaft designed pump head & roller assembly allow smooth installation and replacement
- NEMA 4X, NSF 61 & 372, cULus indoor/outdoor, CE IP65

Maximum Flow Rates & Pressure Rating
40 gpd, up to 100 psi / 151.4 lpd, up to 6.9 bar
85 gpd, up to 25 psi / 321.8 lpd, up to 1.7 bar

Voltage
120 VAC, 60Hz
230 VAC, 50Hz
THE S SERIES interfaces with process control systems utilizing a 4-20mA output signal and three relay outputs. Built to NEMA 4X for demanding applications. Select from multiple performance indicators and operational modes with intuitive programming and easy navigation. Fine-tune the pump to fit the application; monitor the pump for peace of mind. Prevent unauthorized access to programmed settings with the password protection.

SIMPLE PROGRAMMING
MODES OF OPERATION

Analog Modes of Operation

4-20mA
- Proportional response to a 4-20mA signal; scalable, invertible.
- Speed varies to the signal level.

0-10VDC
- Proportional response to a 0-10VDC signal; scalable, invertible.
- Speed varies to the signal level.

Digital Modes of Operation

PULSE
- Accepts a dry contact or open collector type input signal from a controller or water meter.
- Activates at the number of pulses received, to run for a set amount of time (batch dosing).

HALL EFFECT
- Speed varies according to Hall Effect input from a controller or flow meter.
- Program is based on meter's K factor, process flow range and desired pump output.

PPM FEED
- Accepts a dry contact or open collector type input signal from a flow switch.
- Program is based on the process flow rate, chemical concentration, chemical specific gravity and the desired ppm feed rate.

Constant Flow
- Program is based on the process flow rate, chemical concentration, chemical specific gravity and the desired ppm feed rate.

Variable Flow
- Speed varies to maintain the desired ppm feed rate.
- Program is based on meter's K factor, process flow range, chemical concentration, chemical specific gravity and desired ppm feed rate.

Manual
- Speed controlled manually.
- Adjustable from 0% to 100% in 1% increments.

7 DAY / 24 HOUR TIMER
- Program with a clock in real time.
- Run for a specific day, at a specific time, at speeds from 1% to 100%.
- 24 independent events, any combination of days.

CYCLE TIMER
- Run on a repeatable ON/OFF sequence.

Analog Signal Output

4-20mA
- Produces a non-adjustable, proportional signal corresponding to the speed percentage the pump is running. 4mA=0% & 20mA=100%

Digital Signal Output

RELAYS
- Dry contact signal; program normally open or normally closed.
- Indicate an alarm.
- Repeat an incoming signal.
- Transfer operation to another S Series pump in Standby.

SMART TECHNOLOGY

PERFORMANCE INDICATORS

The S Series has programmable performance indicators to communicate the pump status to the operator.

INDICATORS All Modes of Operation

TUBE LEAK The tube leak function detects solution in the pump head and a tube icon will appear on the display. Set an optional display alarm for TUBE LEAK to blink. Set the pump to stop or continue to run and/or set an optional relay to activate when a leak is detected. When needed, calibrate the sensitivity.

TUBE TIMER With the internal tube timer, the operator sets the tube life expectancy in hours and the TUBE CHANGE display alarm will blink when the number is reached.

STANDBY The Standby display alarm blinks on the display when the pump is in standby. The Standby input is utilized to remotely start or stop the pump. For example, if the primary S Series encounters a problem, the Standby input transfers operation from the primary S Series to the back-up S Series without interruption.

Additional indicators available in all modes of operation:
DRIVE FAULT, MODE CHANGE, TRANSFER, REPEAT PULSE, RUN and OFF.

INDICATORS Specific Modes of Operation

HIGH SIGNAL 4-20mA or 0-10VDC
LOW SIGNAL 4-20mA or 0-10VDC
SIGNAL OVERRUN Pulse

HIGH FLOW Hall Effect or PPM Feed-Variable
LOW FLOW Hall Effect
